Andrei Costin

# The role of phone numbers in understanding cyber-crime

### A. Costin \* J. Isachenkova \* M. Balduzzi + A. Francillon \* D. Balzarotti \*

\*Eurecom, Sophia Antipolis, France

 $^+\mathrm{Trend}$  Micro Research, EMEA

July 11, 2013

### Introduction

#### PST2013

 $\begin{array}{c} \mathbf{Andrei} \\ \mathbf{Costin} \end{array}$ 

Online/digital identifiers in cyber-crime

- Mail
- Domain name/Web site
- Social networks/Nicknames profile
  - Extensive studies: [LMK<sup>+</sup>10, TGM<sup>+</sup>11, KKL<sup>+</sup>08, Ede03, CHMS06]
- Phone numbers
  - Limited studies: [CYK10, STHB99, Pol05, Hyp]
  - Studied mainly in context of premium short number mobile frauds
  - Our main focus

## Introduction

#### PST2013

 $egin{array}{c} \mathbf{Andrei} \\ \mathbf{Costin} \end{array}$ 

Phone number usages

- Mail signatures
- Extensively used in many businesses
- Offers less anonymization than other identifiers
- Links cyber domain to reality domain
- Commonly used in various online frauds, e.g.:
  - Premium numbers fraud
  - Scam fraud

### Introduction

#### PST2013

 $\begin{array}{c} \mathbf{Andrei}\\ \mathbf{Costin} \end{array}$ 

Importance of cyber-crime and phone numbers – example

- Banking *Trojan.Shylock* [symb]
- Injects code into banking websites
- Replaces telephone details into the contact pages of online banking websites

| Injected N                       | umbers                            | Original Numbers         |                                   |  |
|----------------------------------|-----------------------------------|--------------------------|-----------------------------------|--|
| Calling from the UK              | Calling from abroad               | Calling from the UK      | Calling from abroad               |  |
| 0800 310<br>0800 310<br>0800 310 | +44 8705<br>+44 118 9<br>+44 8705 | 08457<br>0845 3<br>08457 | +44 8705<br>+44 118 9<br>+44 8705 |  |

Hypothesis

#### PST2013

- Phone numbers are used in cyber-crime activities
- Can we find telecom operators preference?
- Can we find geographical preference?
- Phone numbers can be a stronger identification metric vs. other identifiers

#### **PST2013**

 $egin{array}{c} \mathbf{Andrei} \\ \mathbf{Costin} \end{array}$ 

- Check those hypothesis against real data-sets
- Evaluate the reliability of automated phone numbers extraction and analysis
  - Identify challenges and limitations
- Automatically find patterns associated with recurrent criminal activities
- Automatically correlate the extracted information for
  - Telecom operator preference
  - Geographic area preference

# Methodology

**PST2013** 

# Datasets I

#### PST2013

## $\begin{array}{c} \mathbf{Andrei}\\ \mathbf{Costin} \end{array}$

### Data Sources initially considered

- SPAM
  - Large and extremely noisy dataset
  - Extremely challenging to extract and clean phone numbers

### WHOIS

- Focused on malicious domains
- High quality dataset (intl. format)
- Phone numbers are dummy or replaced by CERTs' contact numbers

### Datasets II

#### PST2013

 $\begin{array}{c} \mathbf{Andrei}\\ \mathbf{Costin} \end{array}$ 

### ANDROID

- Small and noisy dataset
- Mainly contained short premium numbers open problem

### SCAM

- Large and high quality dataset
- Phone numbers are an important part of business model
- Focus on this dataset

## Phone Number Extraction I

#### **PST2013**

#### Andrei Costin

Success and Reliability of Extraction depend on

- How well formatted the number is
  - Call: 0336 9505705 9 am 5 pm
  - Can be decoded as 2 valid numbers: +443369505705 or +33695057059
  - We aim at obtaining:
    - Non ambiguous normalized number
    - Fully qualified international format number

## Phone Number Extraction II

#### **PST2013**

- How structured and easy to parse the information is
  - WHOIS records (easy) vs.
  - Malicious mobile binary (difficult)
- How noisy the data source is
  - Spam messages are very noisy (to defeat anti-spam filters)
  - Scam messages have almost no noise

# Phone Number Extraction Challenges

PST2013

 $\begin{array}{c} \mathbf{Andrei} \\ \mathbf{Costin} \end{array}$ 

| Example Number obfuscation u   | used | [syma]  |         |
|--|------|---------|---------|
|  |      | English | Russian |
|  | 1    | lil     | N/A     |
| Ч^95)1^2^ три ^40^ OO ↓ (495)123400                                  | 2    | Zz      | N/A     |
| 435) 0 JUN 2 5 - 4 0 - 00 5 (  | 3    | N/A     | 33Ээ    |
| 495/Ч;3=2100 0<br>Ч~9~5) 43~2~ один~о~о~0 ((495)432100)              | 4    | N/A     | Чч      |
|  | 6    | N/A     | ЬьБб    |
|  | 0    | Oo      | Oo      |
|  |      | Russian | English |
|  | 1    | один    | one     |
|  | 2    | два     | two     |
|  | 3    | три     | three   |
| Москва) 1 ^2^ три ^40^ ОО<br>Moscow) один 2 3 – 4 0 – 00 (495)123400 | 4    | Четыре  | four    |
| ·  | 5    | пять    | five    |
| MOW) 4~3~2~1~0~00<br>Мос) четерь 3 2:1=00 ноль ( (495)432100         | 6    | шесть   | six     |
|  | 7    | семь    | seven   |
|  | 8    | восемь  | eight   |
|  | -    |         |         |
|  | 9    | девять  | nine    |

## Scam Message Sample

PST2013

Andrei Costin

| File | Edit   | View | Go     | Message | Communicator | Help    |          |      |       |
|------|--------|------|--------|---------|--------------|---------|----------|------|-------|

#### Subject: BUSINESS PROPOSAL

Date: Tue, 26 Jun 2001 22:13:10 -0700 (PDT) From: emmanuel udo <emmanuel z2@yahoo.com> To: tim richardson@senecac.on.ca

FROM: DR, EMMANUEL UDO. TEL: 234 1 759 1549; FAX: 234 1 759 0379. E-MAIL:summanuel\_z2@yahoo.com BUSINESS PROPOSAL

ATTN: PRESIDENT / CEO,

Wy name is ZERLANUEL UDO, a member of the Presidential Tesk Force on Oli Syilage Clean-up. Early last year there was a major oil spillage in the Name bela Begion of Nigeria which rendered over 70% of the communities homeless. The contract was handled by a foreign firm but because of the huge monetary profit we envisaged we decided to over-invoice the contract halance of USIS million, which resulted from contract halance of USIS million, which resulted from to over invoiced contract was taken have been left in a suppense account with the CRNTAL BANK of WIGHER, is

## SCAM Dataset

#### PST2013

- Used user reports aggregator 419scam
- Data timespan: January 2009 August 2012
- Enriched and correlated with numbering plans (NNPC) databases
  - Free (*libphonenumber*)
  - Commercial (more detailed and updated)

# SCAM Email Categories

PST2013

- Emails classified in 10 categories
- $\blacksquare$  3 categories cover over 90% of the data

# SCAM Phones Categories

 $\mathbf{PST2013}$ 

 $\begin{array}{c} {\rm Andrei} \\ {\rm Costin} \end{array}$ 

- ~67k unique normalized phone numbers
- Classified using numbering plans (NNPC) databases

# SCAM Communities/Identity Links

PST2013

- $\blacksquare$  Used clustering techniques, discovered  $identity\ links$
- Identified 102 communities
- Supports the hypothesis that phone numbers are a good metric to study scammers

PST2013

Andrei Costin

### ANALYSIS OF MOBILE PHONE NUMBERS

# Questions and Hypothesis

#### PST2013

#### Andrei Costin

- For how long are phone numbers used?
- Are phone numbers reused or discarded?
- If discarded, after how long?
- Are phone numbers used in roaming?
- If roaming, to which extent?

We try to answer these questions with HLR queries

# HLR Querying

#### PST2013

 $\begin{array}{c} {\rm Andrei} \\ {\rm Costin} \end{array}$ 

- HLR=Home Location Register
- Important component of Mobile Network Operators

## Single HLR Queries

#### PST2013

Andrei Costin

### In Aug 2012, querying once for all mobiles encountered in : Jan – Jun 2012

Jul 2012

Mobile phones network status

# Repeated HLR Queries

PST2013

- $egin{array}{c} \mathbf{Andrei} \\ \mathbf{Costin} \end{array}$
- Performed HLR queries
  - For 1400 numbers
  - Every 3 days
  - During Jul Aug 2012
  - Hypothesis1: Possibility of a link with the Nigerian groups
  - Hypothesis2: May be used to conceal location

## Phone Numbers Reuse

PST2013

Andrei Costin

### Question:

• For how long a scam number is used?

Phone number reuse

![](_page_22_Picture_8.jpeg)

![](_page_23_Picture_0.jpeg)

PST2013

Andrei Costin

### ANALYSIS OF UK PRS PHONE NUMBERS

![](_page_23_Picture_4.jpeg)

![](_page_24_Picture_0.jpeg)

## What are UK PRS numbers? I

#### PST2013

Andrei Costin

### Definition

- Premium rate services (PRS) are a form of micro-payment for paid content, data services and value added services that are subsequently charged to user phone bill
- UK PRS is a 800 Mil. GBP bussines (2009)

![](_page_24_Picture_7.jpeg)

![](_page_25_Picture_0.jpeg)

# What are UK PRS numbers? II

#### **PST2013**

 $egin{array}{c} Andrei \\ Costin \end{array}$ 

Usages

- Conceal geographic location of real phone, via *call forwarding*
- Earn revenue from calls to these numbers
- Challenges
  - Hard to trace the "service provider"
  - Hard to trace the real phone number behind forwarding
  - Hard to detect or prove that fraud is involved

![](_page_25_Picture_11.jpeg)

![](_page_26_Picture_0.jpeg)

# Range of UK PRS numbers

**PST2013** 

- ~34k unique phone numbers in UK range of 07x Premium Rate Services numbers
- 4 operators (out of 88) provide more than 90% of fraud-related UK PRS numbers
- $\blacksquare~~^{5}\%$  of one operator allocated range is fraud-related

![](_page_26_Figure_7.jpeg)

![](_page_26_Picture_8.jpeg)

![](_page_26_Picture_9.jpeg)

![](_page_27_Picture_0.jpeg)

# Conclusion – Results

#### PST2013

 $\begin{array}{c} \mathbf{Andrei}\\ \mathbf{Costin} \end{array}$ 

- Phone numbers are a strong digital identifier in some cyber-crime activities
- Phone numbers help in automated scammer community detection
- HLR lookups help
  - in identifying identify recurrent cyber-criminal business models
  - to study phone numbers' geographical use and activity patterns

![](_page_27_Picture_9.jpeg)

![](_page_28_Picture_0.jpeg)

# Conclusion – Future Work

#### **PST2013**

 $\begin{array}{c} \mathbf{Andrei}\\ \mathbf{Costin} \end{array}$ 

- Phone number extraction is an open, non-trivial problem
  - Improve matching algorithms and their context-awareness
- PRS phone numbers are opaque
  - is a "traceroute" of PRS phone numbers possible?
  - learn business models behind them
- Short number extraction and evaluation
  - Open and challenging, non-trivial problem
  - Becomes a growing concern with mobile malware
